Automatic Tie Wire Twister

Safely and easily twists wire ties. Tie rebar together and hold it in place, making consistent, tight twists every time. Automatic recoil and reload function reduces repetitive action strain.

STEP 1:

Insert the hook of the tool into both loops of the tie wire.

STEP 2:

Pull straight back on the tool to twist the wires tightly.

STEP 3:

If the wire needs further tightening, allow the tool to recoil/reload, and pull again to create more twists. Repeat as needed.

STEP 4:

After you are satisfied with your twisted loop tie, remove the wire twister and move on to your next loop tie.
