

# PERI Combi MDO

## Paperface Hardwood Plywood

### Features

- Light Yellow MDO paper overlay
- 1 sided paper overlay
- 130gr phenolic film back face
- Waterproof Bonding - Phenolic Resin Glue
- 1220x2440x18 mm panels
- Constructed from mix hardwood
- Edges are sealed and painted black

Panels have been tested for strength and stiffness, in configurations that mimic the use of formwork plywood over multiple spans.

### Load-Span Tables

Supports Perpendicular to Long Direction of Panel		
Support Span	L/270	L/360
Center to Center Distance Between Supports (mm)	kN/m <sup>2</sup>	kN/m <sup>2</sup>
203 mm	175	131
305 mm	52	39
406 mm	22	16
488 mm	13	9
610 mm	6	5
Tables are for w, kN/m <sup>2</sup> , applied to formwork		

Supports Parallel to Long Direction of Panel		
Support Span	L/270	L/360
Center to Center Distance Between Supports (mm)	kN/m <sup>2</sup>	kN/m <sup>2</sup>
203 mm	117	102
305 mm	40	30
406 mm	17	13
488 mm	12	9
610 mm	6	5
Tables are for w, kN/m <sup>2</sup> , applied to formwork

## How to extend the lifetime of formwork plywood

Proper handling and cleaning extends the lifetime of plywood panels. This guide shows how to handle and use your PERI formwork plywood. To achieve the best results and the maximum number of re-uses of your plywood, please follow these instructions.

### Storage and Transport

- Protect the panels from contact with water and direct sunlight
- Cover stacks loosely to allow air circulation without heat build up
- Store on levelled ground to avoid deflection
- Panel forms should be carefully piled flat, face to face and back to back
- Immediately after stripping, panels can be stacked into small packages with faces together
- Storing plywood into stacks in between jobs helps minimize the risk of damage to the panels

Protect from weather

### Preparation for forming

PERI plywood is supplied with all four edges sealed for protection and to reduce moisture penetration. Restore edge protection after cutting panels to size:

- Fill any open gaps with putty and seal
- Seal unprotected edges when cutting plywood to size
- Oil the panels before each use
- For minimal damage to the panel surface, supports should be fastened to the back of the panel

Seal edges & holes

### Avoid dropping panels

Workers on site need to handle the panels properly and avoid dropping the panels from high levels.

Oil panels before use

### After use

- When stripping panels, do not force panels with metal prys bars
- Use wood wedges, tapping gradually to strip the panels from the concrete surface
- Clean plywood panels immediately after use
- Immediately after stripping, panels should be cleaned with non scratching tools
- Use water to degrease the plywood surface before re-applying release agent

Fasten from the back

Clean panels after use

#### Note

This information does not apply for plywood installed within a system formwork.

#### Disclaimer

The above information is a guide only. PERI does not accept any liability and/or assume responsibility for the number of re-uses or the concrete surface finish quality, as both are affected by various factors that are out of our control.
